Good Naval Reference Book By Customer For many years now Jane's has been the leader in defense related material particularly in the area of world navies. This edition is no different. Though it is somewhat dated, the information is still better than most. In it you will find in it all ships available in the world that the time of publication from United States' supercarriers to Uganda's lake and river patrol boats. It lists naval ranks, building programs, bases, aircraft, flags and ensigns (but no jacks), ship transfers, and data. If used properly this can be a great source for any one wanting naval information. New copies are very expensive, but used ones can come cheap for those of us like me who want good reference books but cannot afford \$700 a pop.

Containing international data on over 8000 warships, auxiliaries and armed vessels, this updated edition gives information on the operational strengths of each navy, new construction ships, modernization programmes, new weapon systems and new capabilities. All warships and naval auxiliaries are covered and information is presented to allow comparison. Data appears on each ship in standardized fields - for instance, main machinery, speed, missiles, modernization and sales. Drawings illustrate the position of major weapon systems, and there are over 3000 additional photographs. The information in this publication is also available on CD-ROM and by EIS. The subscription price of

this publication includes monthly updates and a summary report. (The yearbook is also available on its own).
