By Laura Knight-Jadczyk
This book is a good read, packed with interesting information, and their working out of the purpose of some megalithic structures is pure genius. I say "some" because I think they went off track due to lack of data. But then, looking at the date of publication, there's no way Knight and Lomas could have known some things that would have drastically altered their interpretations. For example, since this book was published, *The Cycle of Cosmic Catastrophes: Flood, Fire, and Famine in the History of Civilization* by Firestone, West and Warwick-Smith has come out, not to mention several books by dendrochronologist, Mike Baillie including *A Slice Through Time: Dendrochronology and Precision Dating*. One major series of clues they did miss, however, was Victor Clube and Bill Napier's *Cosmic Serpent: A Catastrophist View of Earth History* and "The Cosmic Winter." Another line of research that they could have followed would have been the work of John van Seters who suggests time and again that the source for much of the Old Testament was Greek mythology. Knight and Lomas do a very interesting job of linking the Book of Enoch to Northern Europe, but then propose that some biblical guy named Enoch was taken there and taught secrets. The obvious idea that many things in the bible came from Northern Europe as in ripped off in the 2nd century during the Maccabean times, doesn't really seem to have made much impact on their thinking. Too many people are stymied by this: thinking that the Bible can be taken as an "older" tradition than any other. It simply isn't true. Nevertheless, it is an excellent effort and the interpretation of the astronomical instructions in the Book of Enoch, and its linking to Northern Europe holds up well and is, again, pure genius! The book is well-written, entertaining, a book well worth reading. Recommended. (I would have given it five stars if it had not been for the fact that Knight and Lomas simply didn't dig deep enough!)

By J. Heyman
Not a book of fiction, so there are copious amounts of footnotes and quotes from various sources. The author lays out a series of different sources to backup the premise that the biblical flood was real, and that one had occurred even further back in human history, one that helped prepare for the biblical flood.

By Dorothy P. Niemi
Author Knight traces the meaning and pattern of the megalithic sites like Stonehenge, explaining the astronomical significance of stone placement as it relates to the equinox, solstice, moon cycles, Venus cycles and even comet impact predictions. Knight also relates the content of the Book of Enoch to megalithic predictions and education in celestial events. This is a scientific book, rather than a religious tract. The charts and diagrams are instructive. Two past comet strikes and the destruction caused by those strikes are detailed with scientific information that we should take heed today.

Modern scientific investigations show that Earth has been hit many times by objects such as comets and meteorites. Laboratory work on comet impact effects demonstrates that comets could cause tidal waves to exceed three miles tall and near 400 miles per hour. In the last 10,000 years, there have been two impacts of such proportion: a seven-fold impact into all the world's oceans around 7640 B.C., and a single impact into the Mediterranean Sea about 3150 B.C., the time of Noah's Flood. Uriel's Machine proves ancient Europeans not only survived the 7640 B.C. flood, but developed a highly advanced civilization dedicated to predicting and preparing for future meteoric impacts. Building an international network of sophisticated astronomical observatories, these ancient astronomers created accurate solar, lunar, and planetary calendars, measured the diameter of the Earth, and precisely predicted comet collisions years in advance. This was the true purpose of megalithic structures such as Stonehenge. In 3150 B.C., the ancients' predictions proved true, and their device -- Uriel's Machine -- allowed the reconstruction of civilization in a shattered world. Uriel's Machine also presents evidence that: -There was a single global language on Earth -A single female was a common ancestor to all living humans -Angels bred with human women to create The Watchers, giant half-human beings -The oral tradition of Freemasonry records real events A fascinating study of humankind's past, present, and future, Uriel's Machine proves the world was indeed flooded, but survived wholly due to these ancient Europeans, their heavenly knowledge, and one remarkable machine.

.com The last few years have seen literally dozens of books challenging our beliefs about history and archaeology, each of them seeking to show that the past was quite different from what standard books tell us. With *Uriel's Machine*, Christopher Knight and Robert Lomas move away from their previous books about the Knights Templar, the Freemasons, and the strange chapel at Rosslyn in Scotland, and turn their attention instead to the much more distant past. The authors believe that Earth was hit by a comet in 7640 B.C., and by another one in 3150 B.C., each time resulting in great devastation. From their study of Stone Age monuments around Britain, and of the nonbiblical Book of Enoch, they conclude that Enoch visited Britain some time before 3150 B.C. to learn how to construct a megalithic celestial calculator that, amongst other things, could be used to forecast the arrival of comets. In the end, of course, there can be no absolute proof of this or any other rewriting of history--or indeed of more orthodox versions of history. Knight and Lomas's conclusions are controversial, but that in itself is no bad thing. Existing paradigms in every discipline should be challenged, and this is what they are doing. --David V. Barrett, .co.uk
About the Author
Christopher Knight has a degree in advertising and graphic design and is the managing director of a marketing

and advertising agency. In 1976 he became a Freemason.
